

1.

$$F(x) = x\sqrt{6-x}$$

(a) What is the domain of $F(x)$? $(-\infty, 6]$

(b) Find the intervals of increase or decrease and critical numbers.

(c) Find the intervals of concavity and the inflection points.

(d) Sketch the graph.

increase: $(-\infty, 4]$
 decrease: $[4, 6]$
 crit. numbers: $x=4, 6$
 concave down $(-\infty, 6)$
 never concave up
 no inflection points

$$F'(x) = 1 \cdot \sqrt{6-x} + x \cdot \frac{1}{2} (6-x)^{-\frac{1}{2}} (-1)$$

$$= (6-x)^{-\frac{1}{2}} \left((6-x) - \frac{x}{2} \right) \leftarrow \text{factor lowest power of } (6-x)$$

$$= \frac{6 - \frac{3}{2}x}{\sqrt{6-x}}$$

$$F''(x) = \frac{(-\frac{3}{2})(6-x)^{\frac{1}{2}} - (6 - \frac{3}{2}x) \cdot \frac{1}{2} (6-x)^{-\frac{1}{2}} (-1)}{(6-x)}$$

$$= \frac{(6-x)^{-\frac{1}{2}} \left[-\frac{3}{2}(6-x) + \frac{1}{2}(6 - \frac{3}{2}x) \right]}{(6-x)^{\frac{3}{2}}} = \frac{\frac{3}{4}x - 6}{(6-x)^{\frac{3}{2}}}$$

organize:

x	F	F'	F''
0	0		
4	$4\sqrt{2}$	0	
6	0	d.n.e.	d.n.e.

2.

$$f(t) = t^{4/5}(t-4)^2$$

(a) What is the domain of $f(t)$? $(-\infty, \infty)$

(b) Find $f'(t)$. What is its domain? formula below; $(-\infty, 0) \cup (0, \infty)$

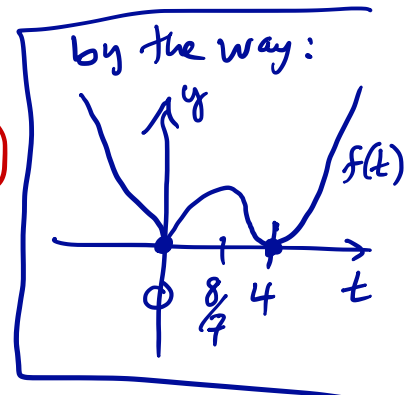

(c) Find all the critical numbers. $C = 0, \frac{8}{7}, 4$

$$f'(t) = \frac{4}{5} t^{-\frac{4}{5}} (t-4)^2 + t^{4/5} 2(t-4)$$

factor lowest powers

$$= t^{-\frac{4}{5}} (t-4) \left[\frac{4}{5} (t-4) + 2t \right]$$

$$= \frac{(t-4) \left(\frac{14}{5}t - \frac{16}{5} \right)}{t^{1/5}}$$

$\therefore f'(c) = 0$ at $c = 4, \frac{8}{7}$
 $f''(c)$ d.n.e. at $c = 0$

3.

$$g(x) = \frac{e^x}{1 - e^x}$$

(a) What is the domain of $g(x)$?

$x \neq 0$ or $(-\infty, 0) \cup (0, \infty)$

$\therefore x=0$ is vertical
 $y=0$ is hor.
 $y=-1$ is hor.

(b) Find the horizontal and vertical asymptotes.

$\lim_{x \rightarrow 0^-} g(x) = +\infty$, $\lim_{x \rightarrow 0^+} g(x) = -\infty$
 $\lim_{x \rightarrow \infty} g(x) = -1$, $\lim_{x \rightarrow -\infty} g(x) = 0$
 ← §4.4 helps with this kind of limit you can do it anyway!

(c) Find the intervals of increase or decrease and critical numbers.

no critical #s
 Increase: $(-\infty, 0) \cup (0, \infty)$
 never decreasing

(d) Find the intervals of concavity and the inflection points.

Concave up on $(-\infty, 0)$, concave down on $(0, \infty)$, no inf. pts

(e) Sketch the graph.

$$g'(x) = \frac{e^x(1 - e^x) - e^x(-e^x)}{(1 - e^x)^2} = \frac{e^x}{(1 - e^x)^2} \quad \therefore g'(c) = 0$$

has no solns and $g'(x) > 0$ always

$$g''(x) = \frac{e^x(1 - e^x)^2 - e^x 2(1 - e^x)(-e^x)}{(1 - e^x)^4} = \frac{e^x(1 - e^x) + 2e^x e^x}{(1 - e^x)^3}$$

$= \frac{e^x(1 + e^x)}{(1 - e^x)^3} \quad \therefore g''(c) = 0$ has no solutions
 and $g'(x) > 0$ if $x < 0$
 $g'(x) < 0$ if $x > 0$

x	g	g'	g''
-1	+0.6	+	+
0	d.n.e.	d.n.e.	d.n.e.
1	-1.6	+	-
