Math 614 Numerical Linear Algebra (Bueler)

Wednesday 11 October 2023

Midterm Quiz 1

In-class or proctored. No book, notes, electronics, calculator, internet access, or communication with other people. 100 points possible.

65 minutes maximum!

1. Let
$$A = \begin{bmatrix} 1 & -1 \\ 0 & 1 \end{bmatrix}$$
.

(a) (5 pts) What are the eigenvalues of A? (Give some brief explanation, or show work.)

$$\lambda_1 = \lambda_2 = 1$$
 because the eigenvalues of triangular matrices are on the diagonal

[also: $p(x) = del(xI-A) = (x-1)^2$ has root $\lambda = \lambda = 1$]

(b) (10 pts) What is $||A||_2$? (Hint. Start as though you are finding singular values?)

$$B = A^*A = \begin{bmatrix} 1 & 0 \\ -1 & 1 \end{bmatrix} \begin{bmatrix} 0 & 1 \end{bmatrix} = \begin{bmatrix} -1 & -1 \\ -1 & 2 \end{bmatrix}$$

$$P(X) = det(XI - B) = (X - 1)(X - 2) - 1 = X^2 - 3X + 1 = 0$$

$$X = \frac{3 \pm \sqrt{9 - 4}}{2} = \frac{3 \pm \sqrt{5}}{2} = \frac{3 \pm \sqrt{5}}{2}$$
Thus
$$\sigma_1 = \sqrt{\frac{3 + \sqrt{5}}{2}}$$
So
$$\left(||A||_2 = \sigma_1 = \sqrt{\frac{3 + \sqrt{5}}{2}} \right)$$

- **2.** Suppose A is an invertible $m \times m$ matrix which has SVD $A = U\Sigma V^*$. Let σ_j denote the ordered singular values of A.
- (a) (7 pts) Write A^{-1} in terms of U, Σ , and V, and simplify.

$$(A^{-1} = (u \Sigma v^*)^{-1} = (v^*)^{-1} \Sigma^{-1} u^{-1} = V \Sigma^{-1} u^*)$$

(b) (8 pts) From **(a)**, explain why $||A^{-1}||_2 = 1/\sigma_m$.

$$||A^{-1}||_{2} = ||V\Sigma^{-1}U^{*}||_{2} = ||Z^{-1}||_{2}$$

$$= ||A^{-1}||_{2} = ||V\Sigma^{-1}U^{*}||_{2} = ||Z^{-1}||_{2}$$

$$= ||A^{-1}||_{2} = ||V\Sigma^{-1}U^{*}||_{2} = ||Z^{-1}||_{2}$$

$$= ||A^{-1}||_{2} = ||A^{-1}||_{2}$$

Extra Credit A. (3 pts) Continuing problem **2** above, construct an SVD of A^{-1} from the SVD of A. (*Hint.* More subtle. Be careful with the ordering required for SVD.)

3. (10 pts) Show that if Q is unitary and λ is an eigenvalue of Q then $|\lambda| = 1$. (Hint. If z is a complex number then $|z|^2 = \bar{z}z$ where \bar{z} is the conjugate.)

Pf: Suppose
$$Q_{x}=\lambda \times \text{ for } x\neq 0$$
. Then
$$(Q_{x})^{*}(Q_{x})=(\lambda \times)^{*}\lambda \times = x^{*}\bar{\lambda}\lambda \times = |\lambda|^{2}||\lambda||_{2}^{2}$$
but also
$$(Q_{x})^{*}(Q_{x})=x^{*}Q^{*}Q_{x}=x^{*}\bar{\lambda}^{*}\chi = ||x||_{2}^{2}.$$
Thus $|\lambda|^{2}||x||_{2}^{2}=||x||_{2}^{2}$, so $|\lambda|^{2}=||s||$ since which the solution of t

4. (10 pts) Suppose $q \in \mathbb{C}^m$ is a unit vector. Show $F = I - 2qq^*$ is unitary.

$$F^{*}F = (I - 288^{*})^{*} (I - 288^{*})$$

$$= (I - 2(88^{*})^{*}) (I - 288^{*})$$

$$= (I - 299^{*}) (I - 288^{*})$$

$$= I - 288^{*} - 288^{*} + 488^{*}88^{*}$$

$$= I - 488^{*} + 488^{*}$$

$$= I - 488^{*} + 488^{*}$$

$$= I,$$
so f is unifam.

5. (a) (10 pts) Let $A \in \mathbb{R}^{m \times n}$ and $x \in \mathbb{R}^n$. Write a pseudocode or MATLAB code for the standard algorithm which computes the matrix-vector product Ax.

Sunction
$$b = matvec(A, x)$$

 $b = 0$
for $i = 1: m$
for $j = 1: n$
 $b_i = b_i + q_{ij} \times x_j$

(or you can save one addition per bi)

(b) (5 pts) Exactly how many floating point operations occur in the above algorithm?

m · n · 2 =
$$(2mn)$$
onter loop op

$$(=m \cdot (n \cdot 2 - 1) = 2mn - m$$
if you smed above)

6. (a) (7 pts) Suppose $\hat{Q} \in \mathbb{C}^{m \times n}$ has orthonormal columns. The product $\hat{Q}^*\hat{Q}$ has a particularly simple form. State what the form is and prove it.

$$\hat{Q}^*\hat{Q} = \mathbf{I}_{n\times n}$$

Pf: In the matrix product AB, the entry (AB) is (essentially) an inner product (AB) is = ai* bs. In our case, (a*â) is = qi* bs. In our case, (i=j) (i

(b) (8 pts) Continuing with the same matrix \hat{Q} , show that $P = \hat{Q}\hat{Q}^*$ is an orthogonal projector.

$$P^{2} = P \quad \text{and} \quad P^{*} = P$$

$$P^{3} = \hat{Q} \hat{Q}^{*} \hat{Q} \hat{Q}^{*} = \hat{Q} (\hat{Q}^{*} \hat{Q}) \hat{Q}^{*}$$

$$= \hat{Q} \hat{Q}^{*} = P$$

$$P^{*} = (\hat{Q} \hat{Q}^{*})^{*} = \hat{Q}^{*} \hat{Q}^{*}$$

$$= \hat{Q} \hat{Q}^{*} = P$$

$$= \hat{Q} \hat{Q}^{*} = P$$

7. (10 pts) By any by-hand method, compute a reduced QR decomposition of

$$a_{1} = \begin{bmatrix} 1 & 1 \\ 0 & -1 \\ 1 & 0 \end{bmatrix}$$

$$a_{1} = \begin{bmatrix} 1 & 1 \\ 0 & -1 \\ 1 & 0 \end{bmatrix}$$

$$a_{2} = \begin{bmatrix} 1 & 1 \\ 0 & -1 \\ 0 & 0 \end{bmatrix}$$

$$a_{3} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{4} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{5} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a_{7} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$a$$

8. (5 pts) Suppose $A \in \mathbb{C}^{m \times n}$ and that $\|\cdot\|$ is a norm on \mathbb{C}^n and that $\|\cdot\|'$ is a norm on \mathbb{C}^m . Define the induced matrix norm $\|A\|$. (Full credit requires using the correct norms in the correct places.)

9. (5 pts) Suppose P is an orthogonal projector. Show I - P is an orthogonal projector.

$$(I-P)^2 = I-P$$
, $(I-P)^* = I-P$
 $P^{f:} (I-P)^2 = I-P-P+P^2 = I-2P+P=I-P$
 $(I-P)^* = I^*-P^* = I-P$.

Extra Credit \emptyset . (3 pts) Suppose $A \in \mathbb{R}^{3\times 3}$, and suppose we know the value of the following norms: $||A||_2 = 10$, $||A^{-1}||_2 = 1$, $||A||_F = 11$. Find all singular values of A.

$$||A||_{2} = ||\sigma_{3}|| = ||\sigma_{3}|| = ||\sigma_{3}|| = ||\sigma_{3}|| = ||\sigma_{1}||_{2} = ||\sigma_{1}|| + ||\sigma_{2}|| + ||\sigma_{3}|| = ||\sigma_{1}|| + ||\sigma_{2}|| + ||\sigma_{2}|| = ||\sigma_{1}|| + ||\sigma_{2}|| +$$
